

# Structural engineer with experience of timber constructions

The interest in Södra's products for large-scale solid timber construction is considerable and global demand for construction using solid timber is growing strongly. In order to drive Södra's cross-laminated timber (CLT) venture, we need more employees, and we are now looking for people who want to join us in developing our structural engineering services. Together with our two existing planners, you will be responsible for building up our project planning department.

## Your duties

As a structural engineer with us, you will have a broad role with a variety of duties and considerable responsibility. You will work closely with project managers, planners and customers to develop the best and most efficient structural solutions. You will have overall responsibility for the structural design and fill an important role as a supervisor and mentor in the development of the group.

## Your primary duties will be:

- Dimensioning and production planning of frames.
- Training newly graduated construction engineers and experienced concrete engineers in timber construction.
- Building up a project planning department.
- Expert support, investigation and consulting.

## Your experience

To ensure that you succeed and are comfortable in your new position, we believe that you have solid experience in design calculation and are interested in leading and developing yourself and others. You have previously worked with design calculations for timber frames and have the skills to prepare technical reports.

In addition to knowledge and expertise in the field, the personal traits of our new structural engineer are also important to us. We place high value on qualities such as professionalism,

commitment and accountability. You must have good communication skills and work in a coherent and structured manner. For us, it is important to harness all of the expertise in the labour market. We welcome all applicants and strive for diversity.

## Qualifications

- Relevant university-level education.
- Broad experience of structural engineering projects.
- Good experience of structural engineering and building physics.
- Experience of timber constructions.
- Good command of English.

## Placement/Employment

The position will be based in Väröbacka, just north of Varberg. This is a permanent role. For this position, we are open to a flexible way of working that could allow you to work some days at the office and some days from home if you so wish.

## Your employer, Södra

Södra is Sweden's largest forest-owner association, with 53,000 forest owners as its members. Södra is an international forest industry group, with operations based on processing its members' forest products. Our business spans from traditional products such as paper pulp and sawn timber, to exciting new applications such as renewable energy, lightweight construction material and dissolving pulp used to make clothes. We are simply not content to refine the products that our customers have long come to rely on and use in their own processes – we are also constantly looking for new applications for the world's best raw material.
