

Building the Future in Wood

We are a young company with experience and passion in engineered timber construction. We develop, design and deliver timber structures Europe, North America and Asia. Our focus is on mass timber structures made from CLT and glulam. Combining high-performance products with our well-founded expertise we develop economically interesting solutions for builders, investors and construction firms worldwide.

For our expanding international project work we are looking for a

Project Engineer and Developer (m/f)

Your tasks:

- Support and consultancy of architects and clients
- Development and design of timber solutions
- Calculation of glulam and CLT constructions
- Finding solutions to technical questions during tender and assembly phases
- Project support and project management

Your qualification:

- Completed studies in timber engineering or qualification as master carpenter
- Experience in timber construction or timber / construction industry
- Very good knowledge of CAD tools and structural engineering
- Confident demeanor, sales oriented, negotiating skills and very good communication skills
- Ability for structured and self-dependent work in team
- Business fluent English, additional language skills are welcome

Your benefits:

- A challenging, versatile occupation in young, innovative company with flat hierarchy
- Flexible work hours and according work environment to better reconcile family and job
- A safe and modern work place in growing future market (green building)
- Performance-based payment with interesting possibilities to develop and grow
- Respectful treatment, support and appreciation in team
- Personal and professional development
- Living and working in one of the most beautiful areas of Germany, next to Austria and Switzerland
